

Project Executable Files

Date	02 July 2026
Team ID	xxxxxx
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA(No data base is added)
5	Environment configuration file (.env.example or similar)	NA(No environment variables are used).
6	Deployed application URL (if hosted)	No
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA (Web application.)
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes (Include Performance Testing document.)
10	Demo video or walkthrough (if required)	Yes (If your mentor requires it; otherwise mark No.)

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not Deployed (Local Flask Application)
Login Credentials (Demo)	Not Applicable (No Login Required)
Platform / Hosting Provider	Local System (Flask Development Server)
Repository Link	https://github.com/Marenhemalatha/Comprehensive-measure-of-well-being-codefiles
Demo Video Link	https://drive.google.com/file/d/152lbKZIYFrjhnX1VipkaRBiH1ues3kR2/view?usp=drivesdk

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Step 1

Clone or download the project repository.

Step 2

Open the project in **Visual Studio Code**.

Step 3

Navigate to the **Flask** folder.

Step 4

Install the required Python libraries.

```
pip install -r requirements.txt
```

Step 5

Run the Flask application.

```
python app.py
```

Step 6

Open the following URL in a web browser.

http://127.0.0.1:5000

Step 7

Click **Start Prediction**.

Step 8

Enter the following details:

- Country
- Life Expectancy
- Expected Years of Schooling
- Mean Years of Schooling
- Gross National Income (GNI)

Step 9

Click **Predict** to view the Human Development Index (HDI) prediction.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	The application runs only on the local Flask server and is not deployed online.	Can be deployed using Render, Heroku, or another cloud platform in future.
2	The selected country is used only for user selection and is not part of the prediction mode	Future versions can encode and use the country as an additional feature if required.
3	Predictions depend on the quality and range of the training dataset.	Retraining the model with updated and more comprehensive HDI datasets can improve prediction accuracy.
